Automatic Updates

The Care Control software collection is always being updated, whether that's to fix issues or add new features. We recommend turning on Automatic Updates on mobile and tablet devices so that the Care Control apps update whenever a new version is released. This will help prevent any issues being caused by old software versions, and also mean you always have access to the latest features.

Please see the following links on how you can turn this on:

Android Devices – *How to update the Play Store and apps on Android – Google Play Help*

Apple Devices – *How to manually update apps on your Apple device – Apple Support*

Both articles contain information on automatic updates, you may have to scroll down to find the relevant section.

If you are unsure on the current version of Care Control Applications, please check this page: Release Notes – Care Control Learning Hub
