Care Plan
Integrity Checks

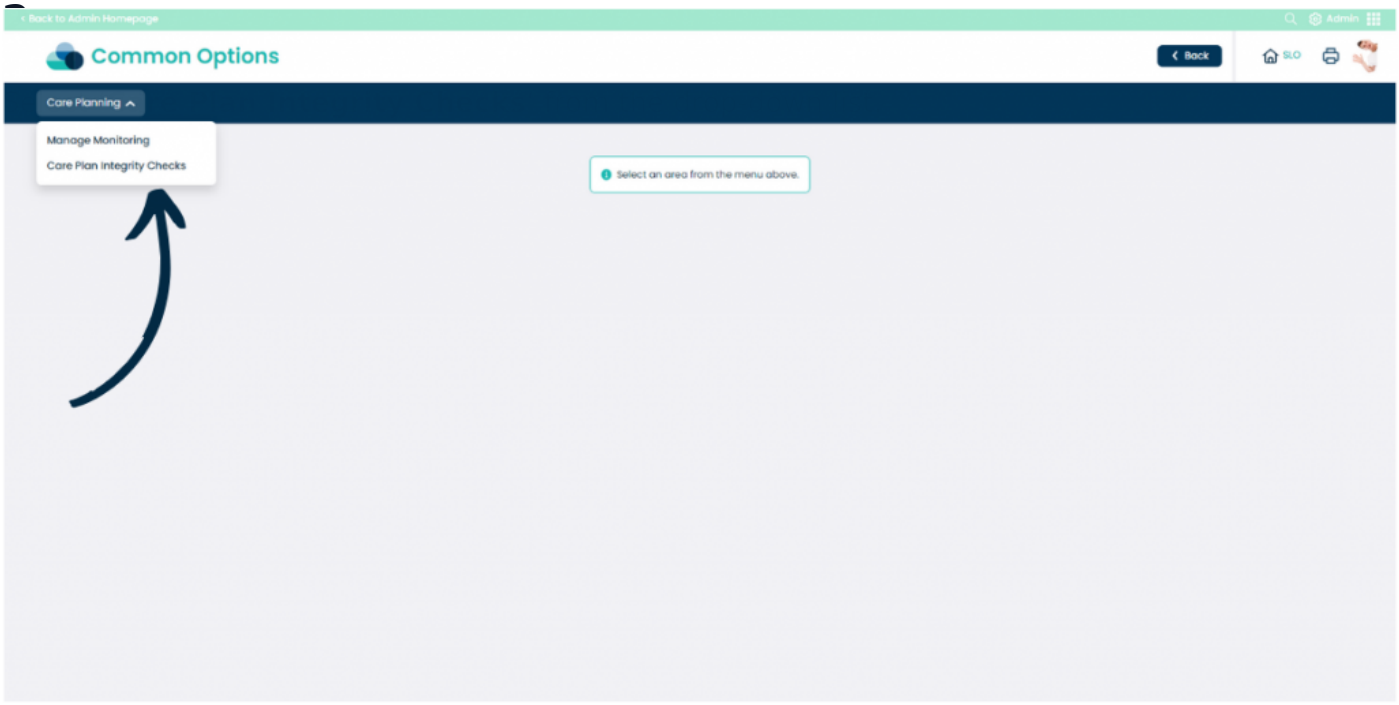

This guide will cover how to access the Care Plan Integrity Checks tool on Care Control Cloud. This feature analyses missing information from a service users care plan.

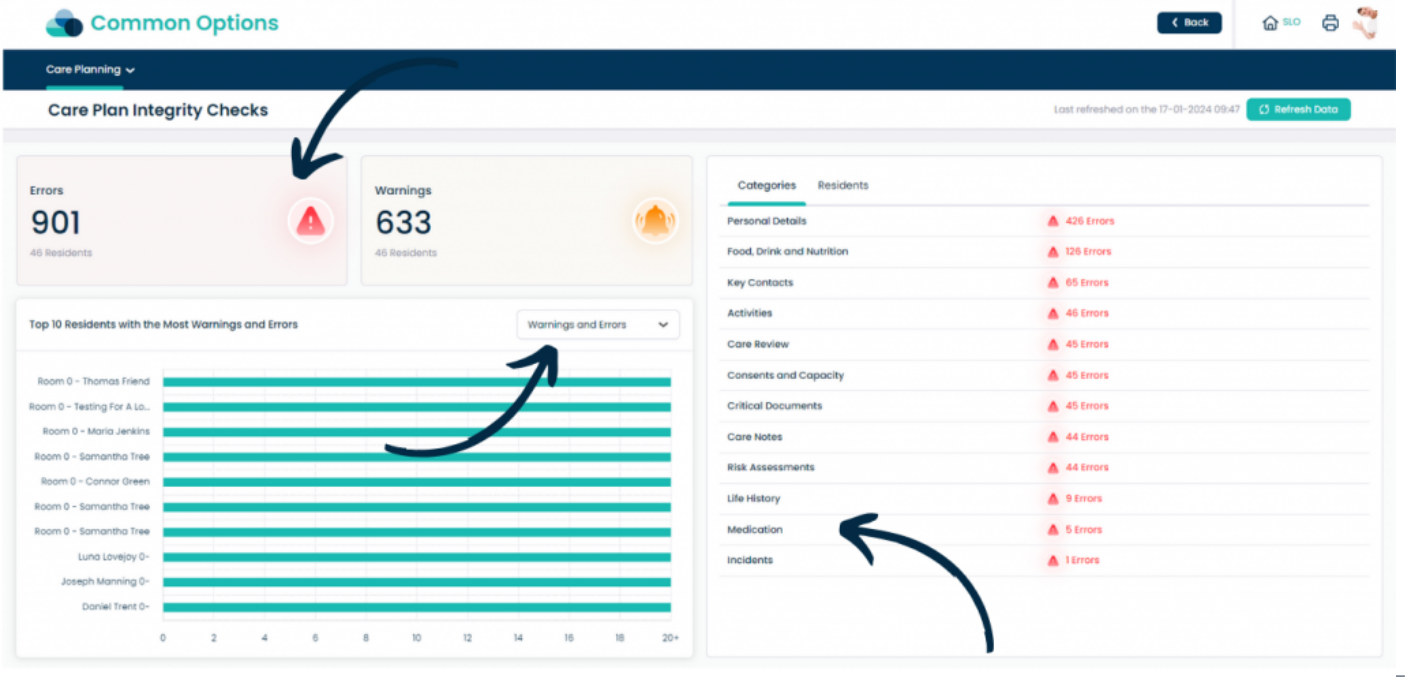

1

From the Admin application in Care Control Cloud, navigate to the '**Care Planning**' area.

3

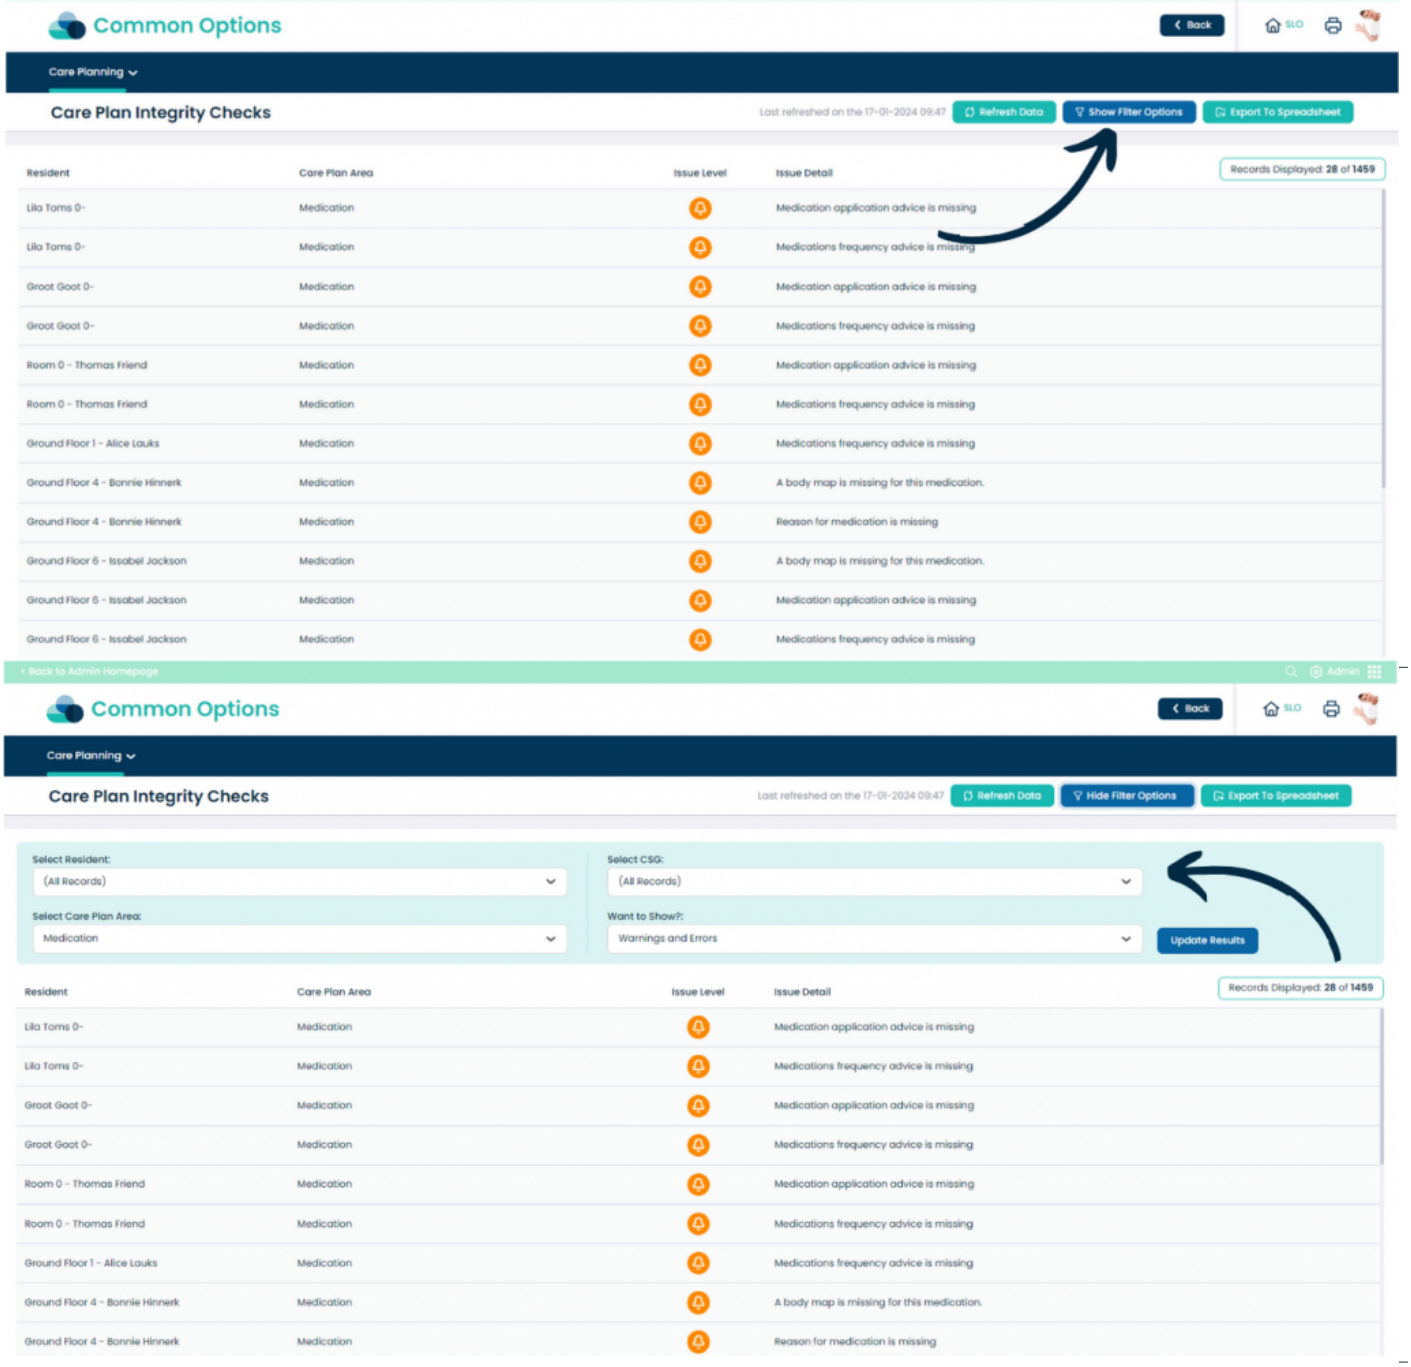

A dashboard will be displayed. Here, a total number of '**Errors**' and '**Warnings**' will be shown for all of your service users. Below this is a chart showing your top service users with the most errors and warnings.

On the right hand side is a list of warning / error '**Categories**'. Click on one to view a full list for the category.

4

In this example, we clicked on '**Medication**'. Here, a list of missing medication information for your service users is shown.

We can further filter this list by pressing '**Show Filter Options**'.

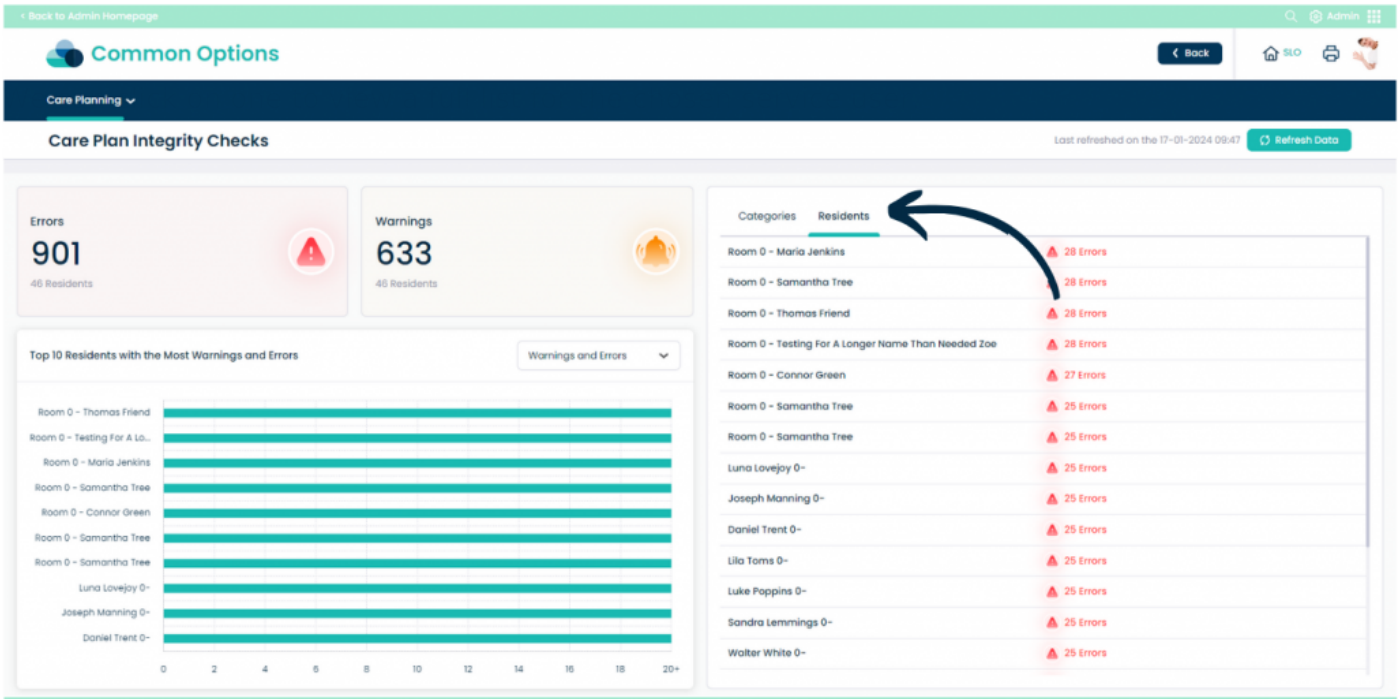

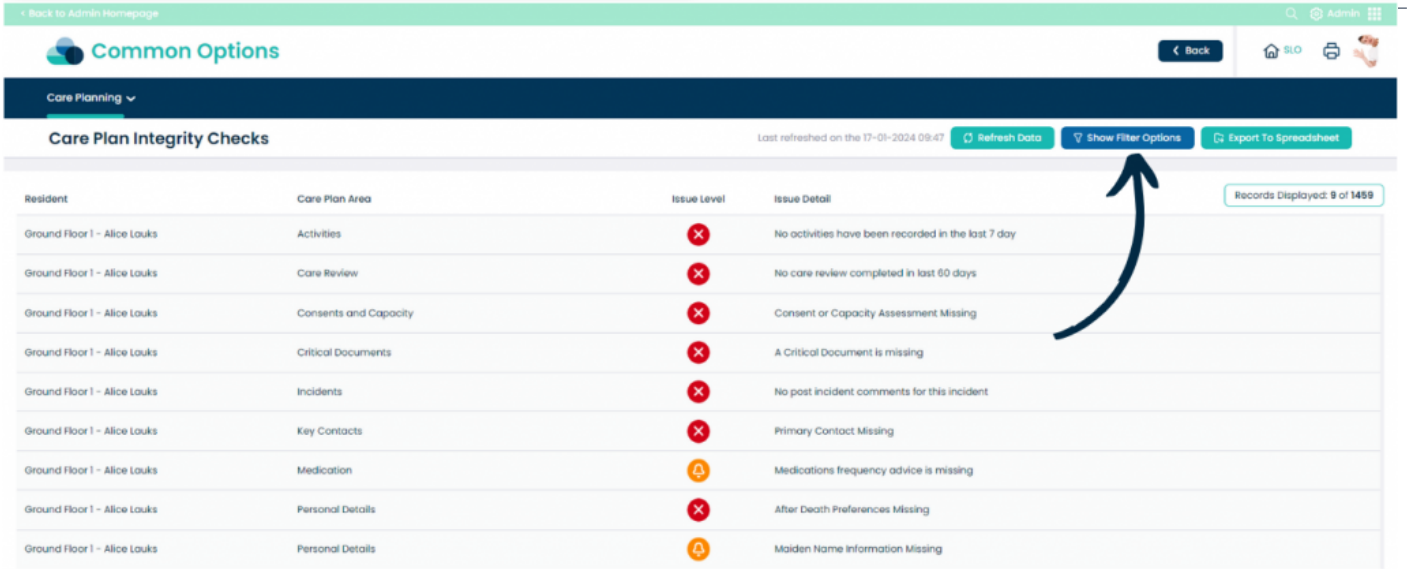

5

You can filter this list by service user, care plan area, CSG and by warnings / errors. Press '**Update Results**' to apply any new filters.

6

Back on the dashboard, we can also view a list of **'Service Users**' with the most warnings and errors.

7

Again, we can filter this list further by pressing '**Show Filter Options**'.

8

Here, add any extra filters and press '**Update Results**'.

To remove an error or warning, simply navigate to the service users Care Plan and enter the
