QR Codes Windows · https://cclearninghub.co.uk/docs/changing-qr-code-security/

Changing QR Code Security

This guide will cover how to change the Security Setting pre-Fix on Care Control Windows. This pre-fix is encoded into each QR Code, and when changed, prevents old codes from working. This can be useful to prevent QR Code misuse.

1

In the Administration of Care Control Windows, navigate to the **System Settings**, which can be found under the Advanced Stuff tab.

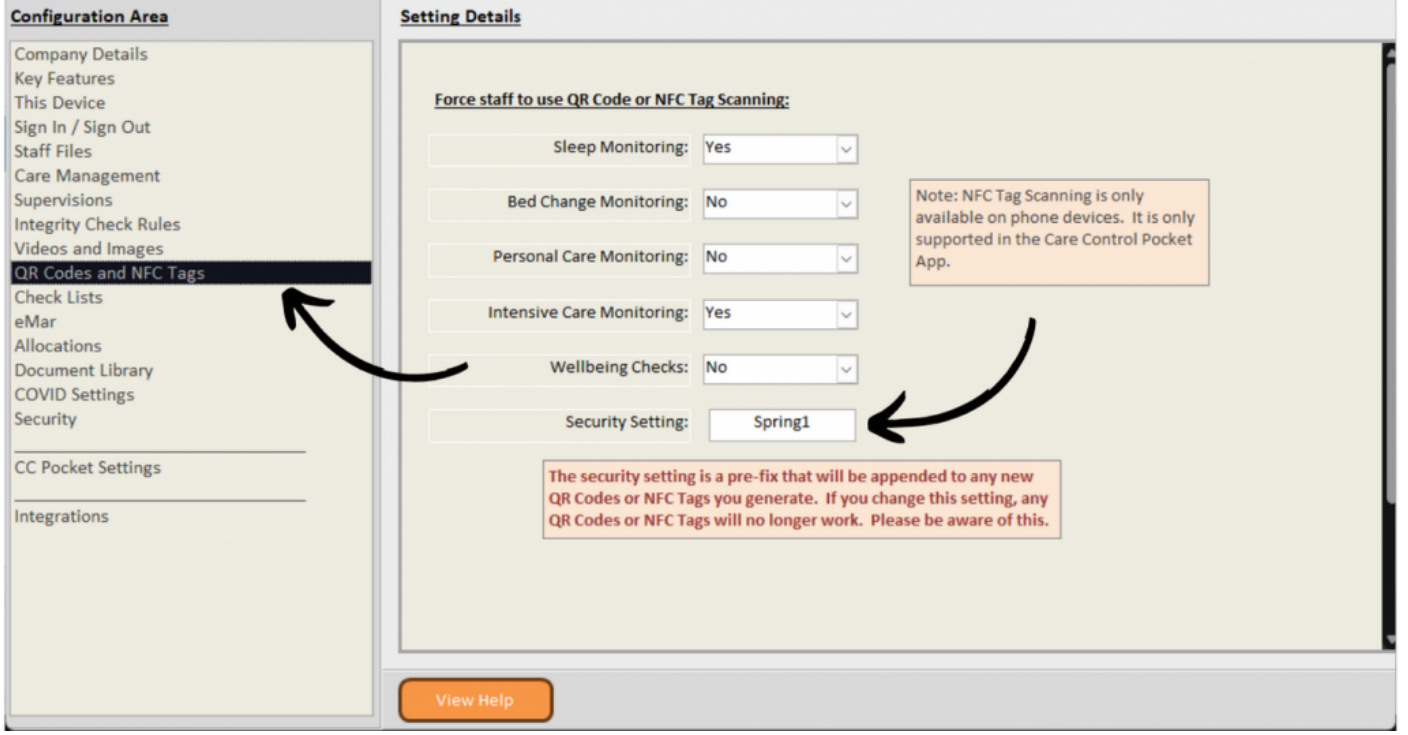

2

Here, select **QR Codes & NFC Tags** from the menu on the left hand side. This will open the related settings on the right hand side of the window.

You can change the **Security Setting** option here. This can be a combination of letters and numbers are you desire.

Please note: all QR Codes will require regenerating after the pre-fix is changed. Any old QR Codes will no longer work.

Make sure to **Save Changes** after making any amendments.

Setting Details
Force staff to use QR Code or NFC Tag Scanning:
Sleep Monitoring: Yes
Bed Change Monitoring: No
Personal Care Monitoring: No
Intensive Care Monitoring: Yes
Wellbeing Checks: No
Security Setting: Spring1
Note: NFC Tag Scanning is only available on phone devices. It is only supported in the Care Control Pocket App.
The security setting is a pre-fix that will be appended to any new QR Codes or NFC Tags you generate. If you change this setting, any QR Codes or NFC Tags will no longer work. Please be aware of this.
