Removing Medication From eMAR

This guide will cover how to remove (deactivate) medication from your eMAR database. Records created using the medication will remain, as well as the medication information itself for integrity purposes, but deactivating it will prevent it from being administered in the future.

1

After signing into eMAR, select **Record Information** from the home page options.

2

Next, select **Medication Database** from the options displayed.

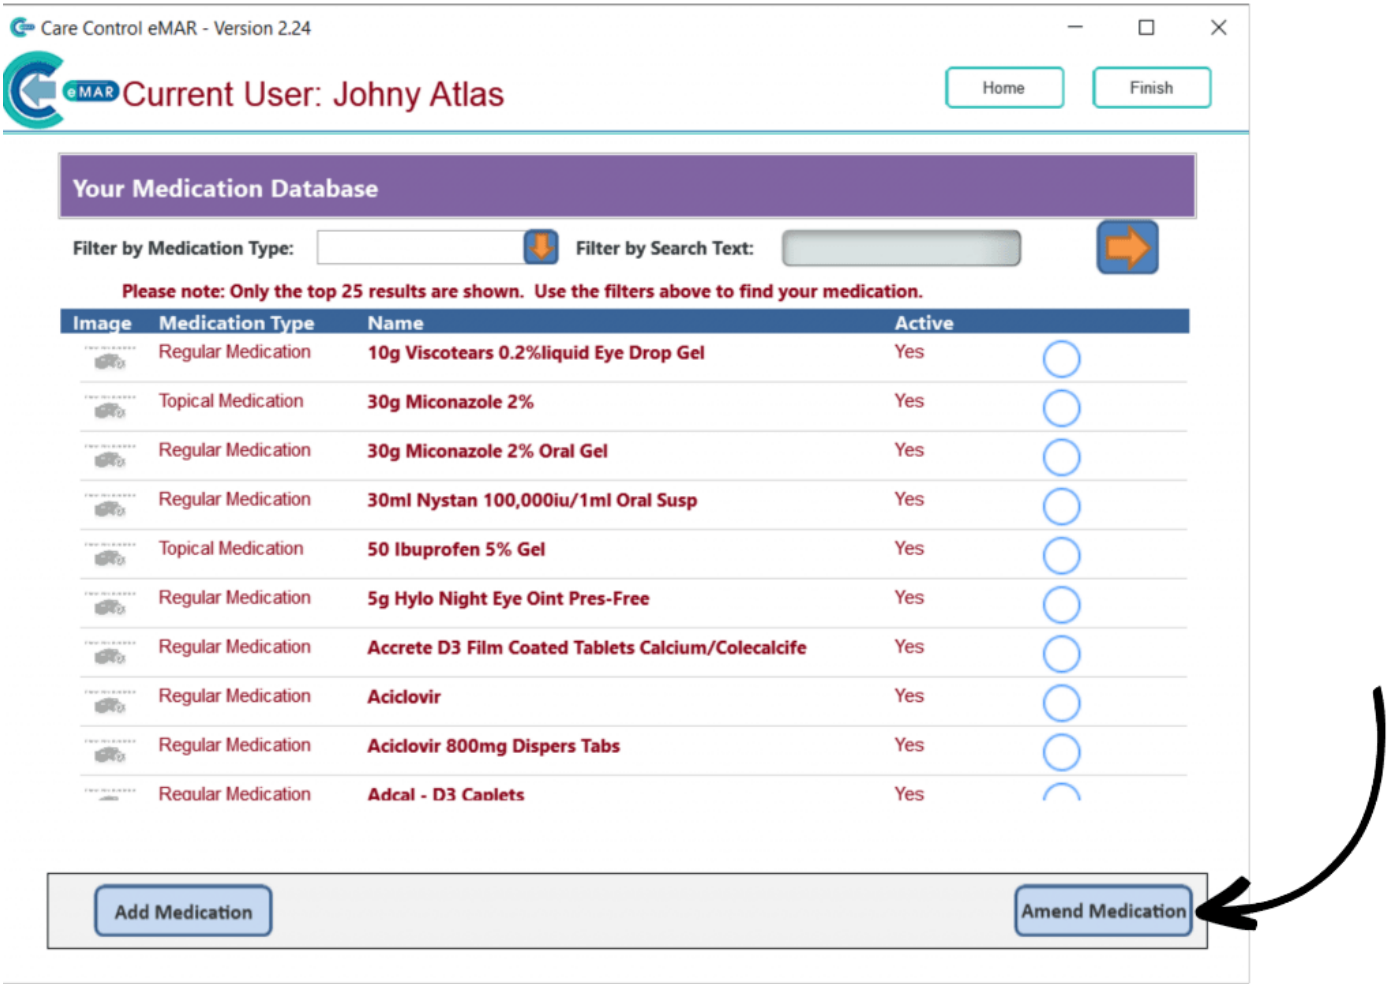
Medication Disposal

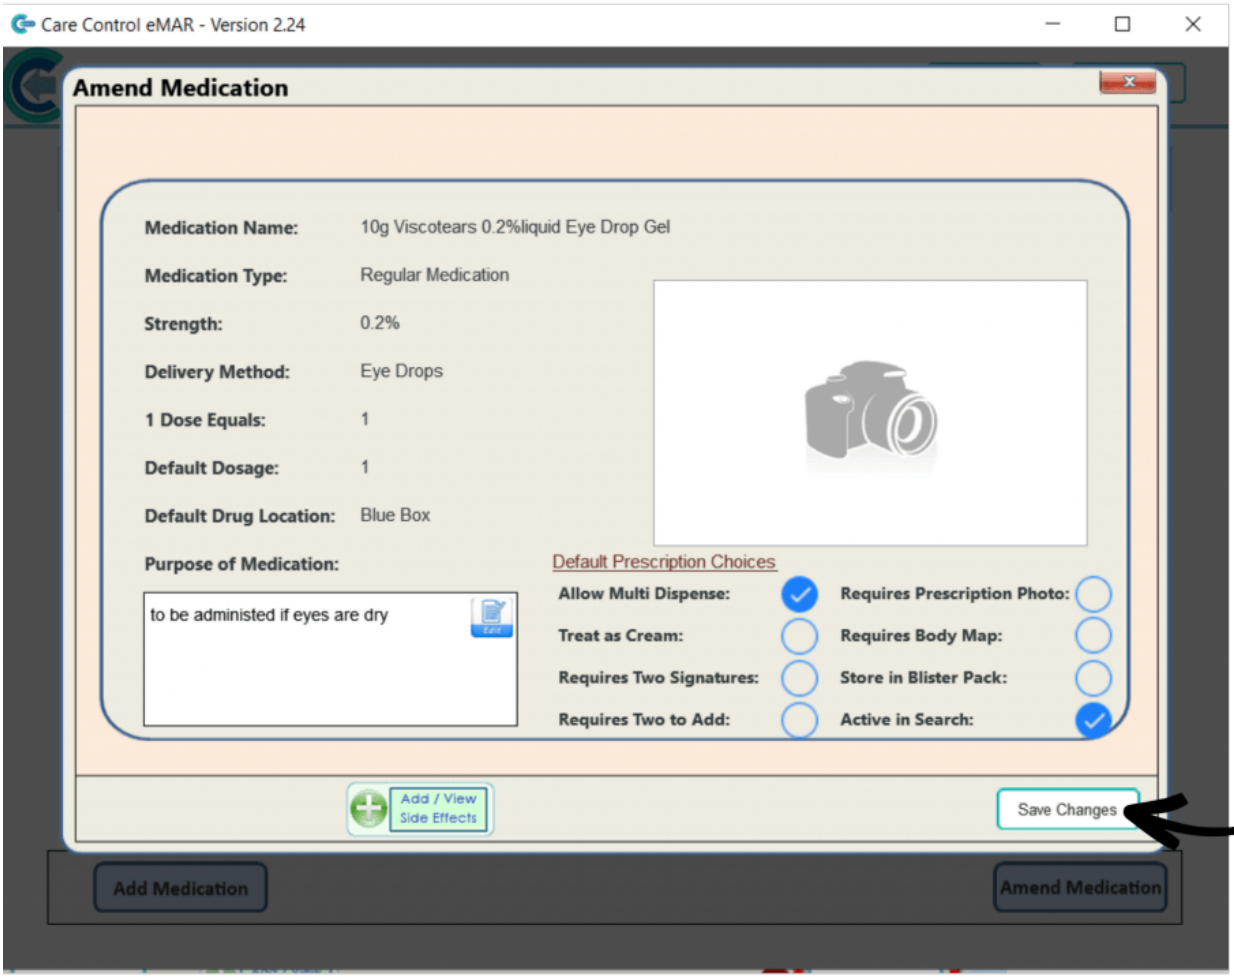


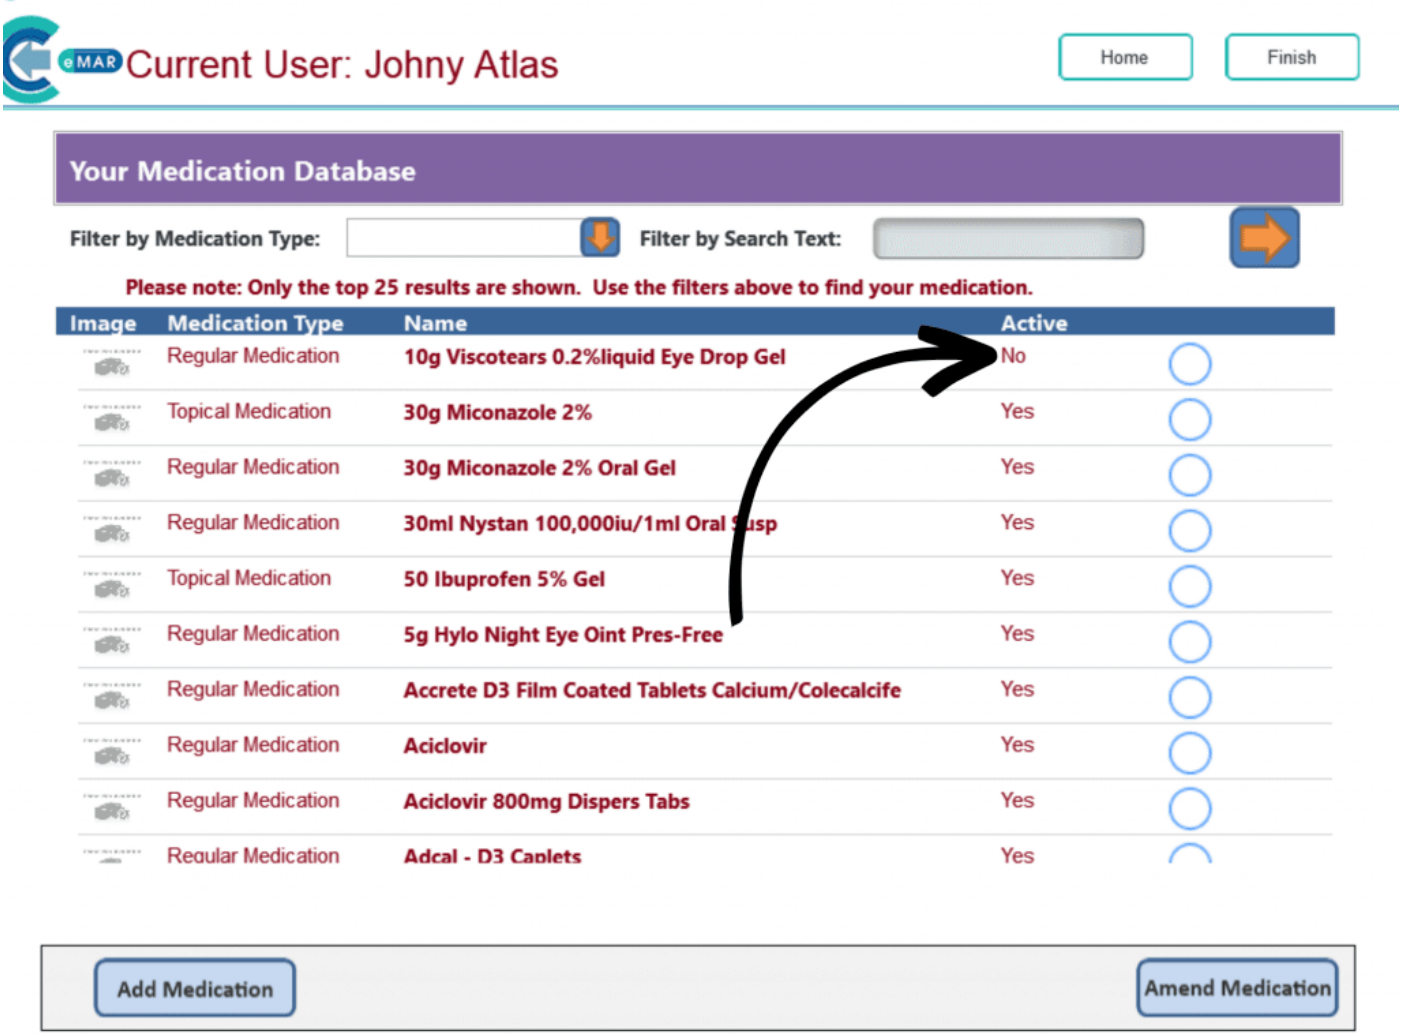
3

A list of all the medication on your eMAR system will be displayed. Navigate to the one you wish to deactivate and select it by tapping the circle to the right of the medication name. Press **Amend Medication**.

4

A medication profile will open. Here, there are some options to amend the medication. To deactivate it, untick the **Active In Search** option in the bottom right of the window.





5

After saving, the medication will now appear as not active in the medication database list.
