## How to Change and View the Administrator Password on Cloud

Kieran Worth

This guide will cover how to change the administration password for your Care Control site. The administration password is an important security measure, as it provides access to certain sensitive features and configuration areas within the Care Control package. By updating this password regularly, you help protect your system from unauthorized changes and ensure that only those with the correct permissions can make adjustments.

It is vital that this password is only known by staff with administrative responsibilities and is not shared with non-admin team members. Limiting access in this way reduces the risk of accidental changes, data breaches, or misuse of system functions. Following the steps in this guide will help you manage your Care Control environment securely and maintain compliance with best practice security standards.
