Locking an iPad/iPhone to Care Control (Kiosk Mode)

You are now able to set your Apple products into “Kiosk” mode. When in kiosk mode users will be unable to exit a selected app without a pin code, meaning you can lock the device to just use Care Control.

Step 1

Firstly, select the **settings** icon on your iPad home screen. Go to “**General**”. Go to “**Accessibility** ” Scroll down and select “**Guided Access**”. Create a guided access pin number—exit settings by selecting the **home button** (physical button below the screen).

Step 2

Re-open **Care Control**. Once open and you can see the Care Control pin screen, **tap the home button 3 times** in quick succession. If successful, a message will display “**Guided Access Enabled**“.

Step 3

The device will be locked into Care Control until guided access is disabled. To disable, triple-tap the home button once more and enter your exit pin.

If you forget your guided access pin number- the iPad will return to normal mode once the battery has run out.
