Modifying System Settings in Cloud

This guide will cover accessing and modifying the system settings within Care Control Cloud.

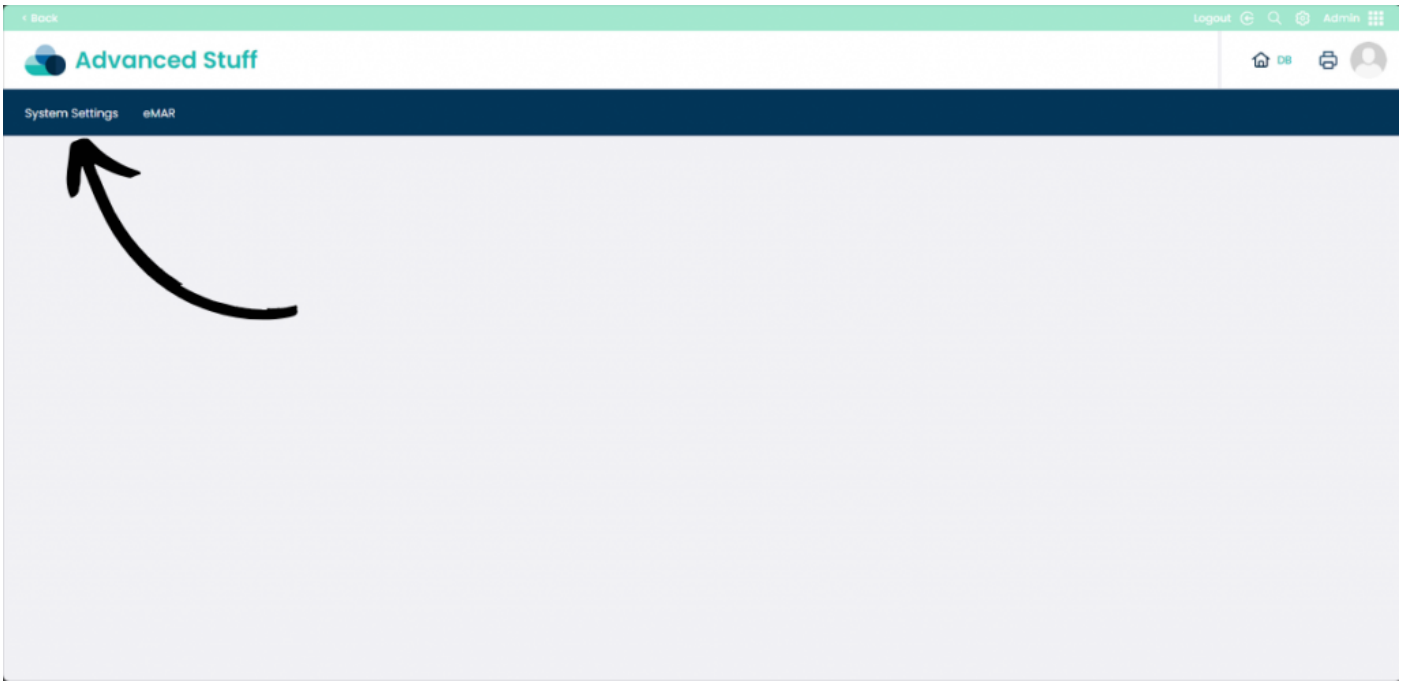

Step 1:

From within the **Admin App** select **Visit** on the **Advanced Stuff** pane.

Step 2:

Now select **System Settings**

Step 3:

On the left hand side of the screen is the **Configuration Area.** This area allows you to select different areas of the system settings. Once you have selected a setting to modify, the right hand side of the screen will be populated with settings you can modify for that specific area.

When you have done modifying ensure to click **Save Changes** before exiting. If you are unhappy with the changes simply select **Cancel** and this will revert the changes.
