Written guide

1. **Enter** the **Org Man** App.
2. Go to **Settings**.
3. Click on **Edit Organisation Settings**.
4. The following settings can be configured:

General Security Settings:

- **Multi-Factor Authentication:** Enable or disable MFA for added login security.
- **MFA IP Address Timeout:** Determines how often MFA is required from the same IP address. For example, setting it to *Always* means MFA will only be requested on the first login from the same IP address.
- **MFA Notification Cooldown:** Sets the cooldown period (in seconds) between MFA notifications.

- **Allowed Failed Login Attempts:** Specifies the number of failed password attempts allowed before the account is locked.
- **Login IP Address Range:** When enabled, users can only log in from specified IP address ranges.
- **Access Mode:** Choose whether users can log in via a web browser or only through another Care Control App.
- **General Link Expire Time:** Sets how long a link (e.g., in a notification) to CC Cloud remains valid.
- **Registration Link Expire Time:** Defines how long a registration email link to CC Cloud remains active.

Security Providers Tab Settings

Navigate to the **Security Providers** tab for additional settings:

- **Automatically Register New Users:** When enabled, users logging in via third-party providers can automatically register. If disabled, users must be manually seeded. Automatic registration is allowed for users from the parent organisation with the same tenant identifier.
- **Automatically Approve New Users:** When enabled, new users registering via third-party providers are auto-approved. If disabled, registration must be approved by management before access is granted.
- **Enable Care Control Login:** Allows users to log in using their Care Control username and password.
- **Provide Tenant Supplier:** Specifies the provider for single sign-on (SSO), if enabled.

Don’t forget to click Save Changes once all settings have been configured.
