Using CSG's within Pocket

CSG filtering can be enabled for Care Control Pocket from the Windows system. This allows users to filter their service user lists by CSG when recording or searching for information.

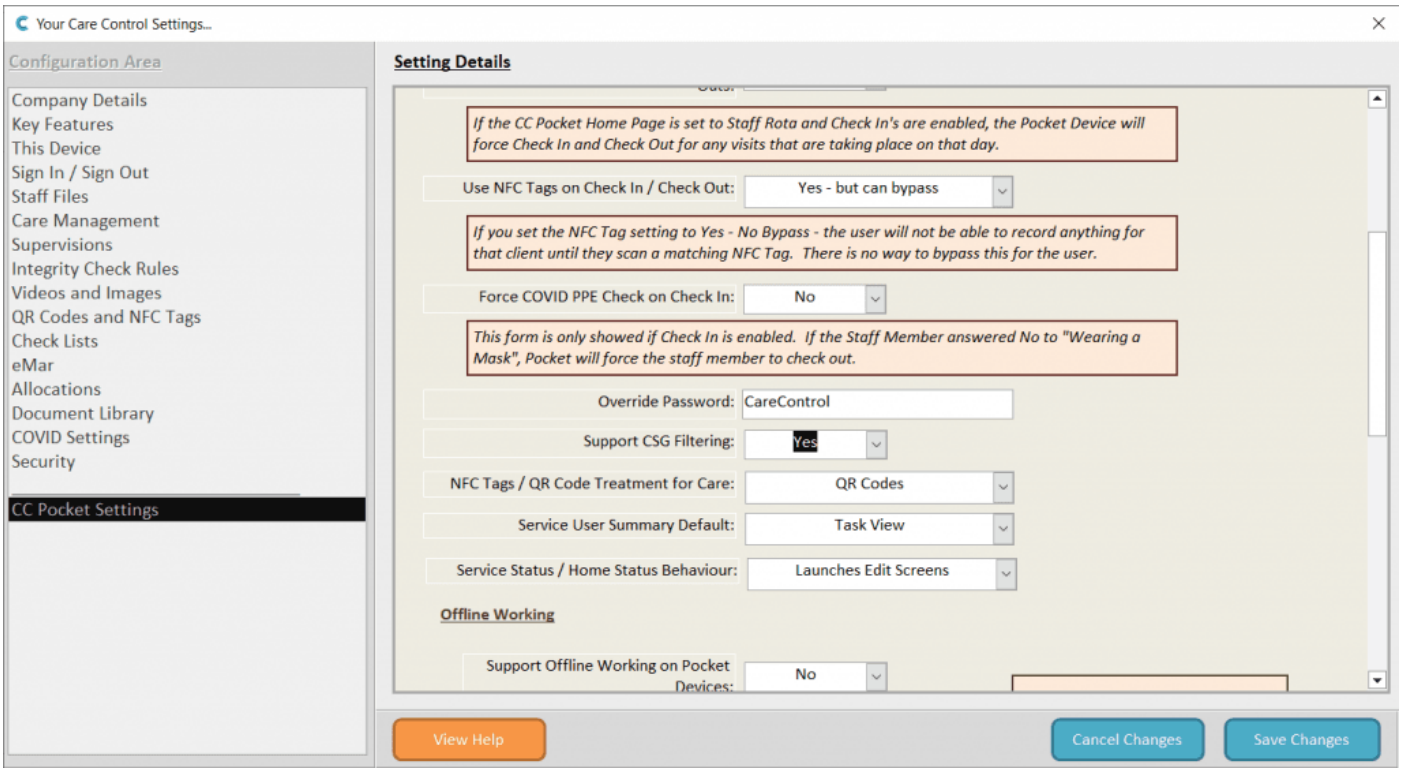

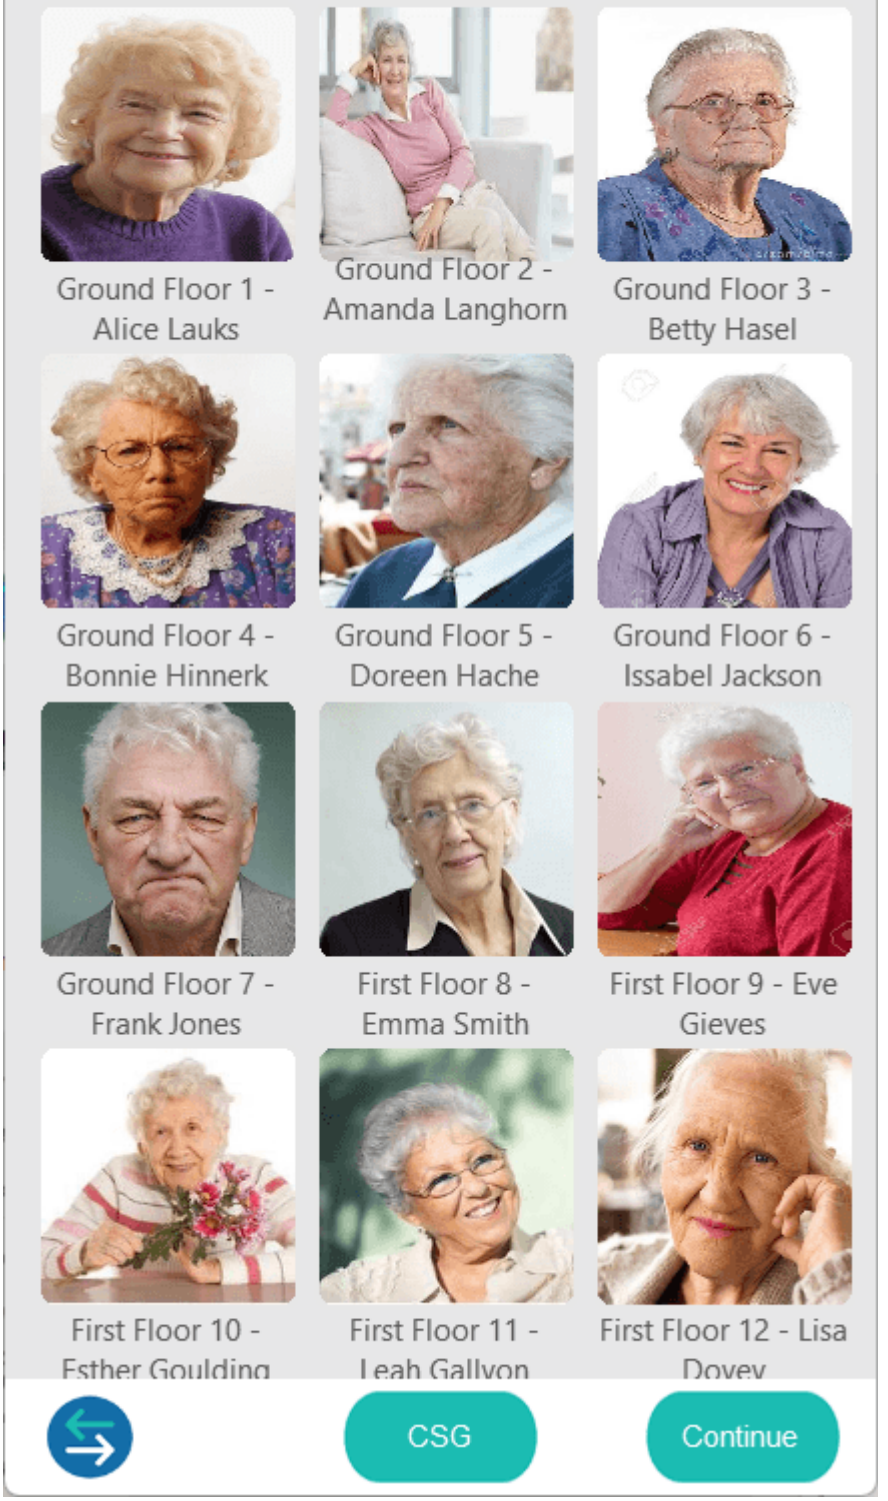

1

In the **Administration of Care Control** Windows, navigate to the **System Settings** tool which can be found under the **Advanced Stuff** tab.

2

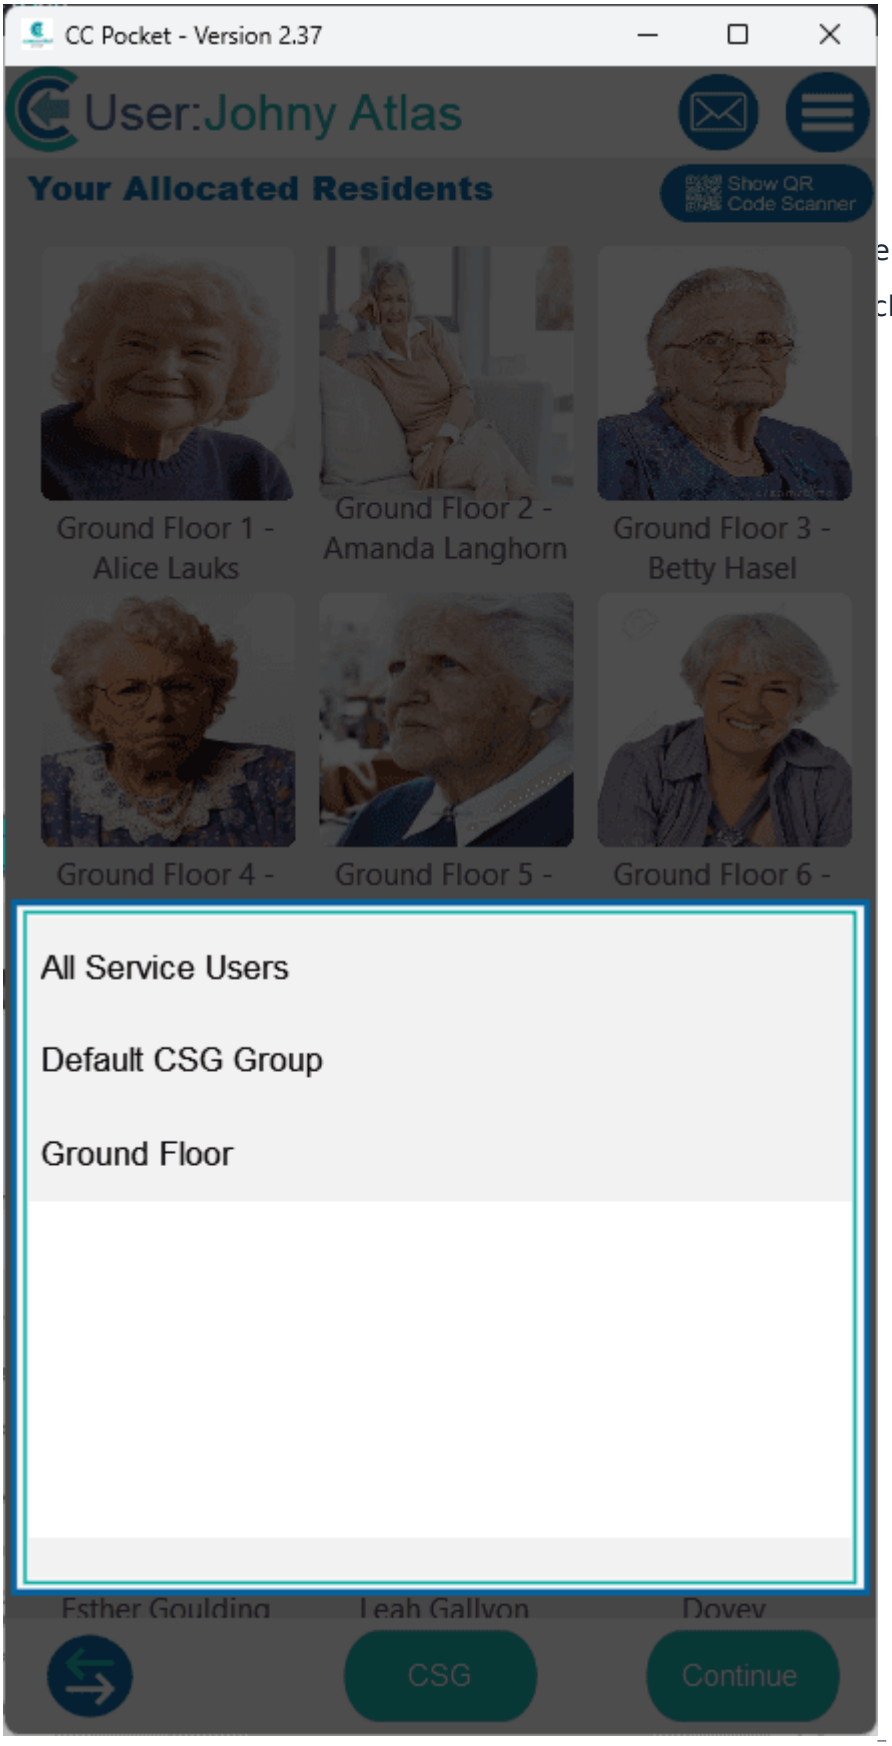

A new window will open. From the options on the left-hand side, select **CC Pocket Settings**.

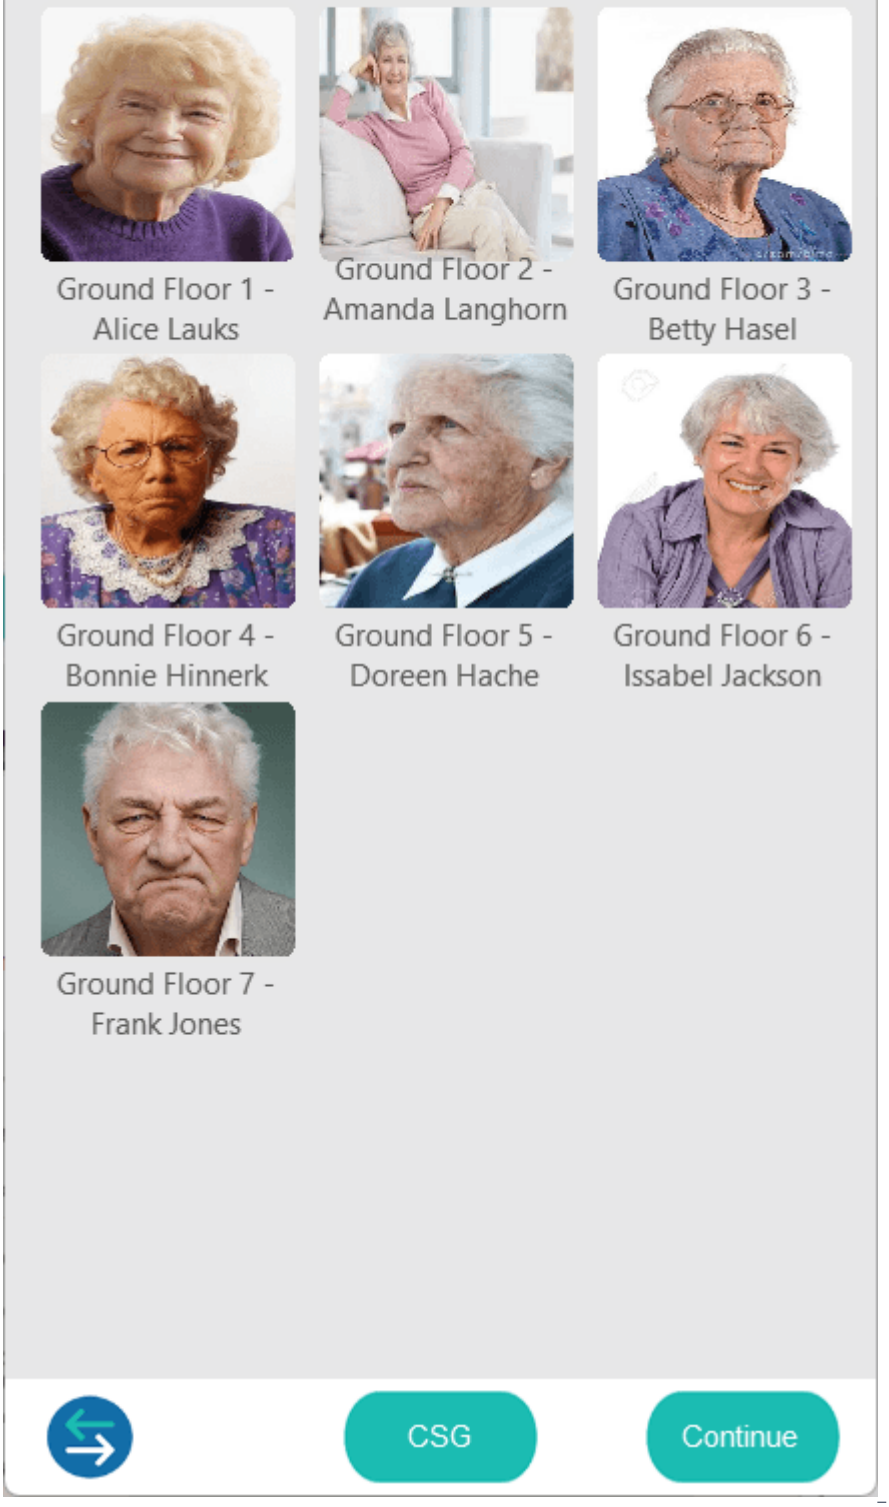

3

Now, after signing into Care Control Pocket, a **CSG** button will show at the bottom of the service user screen.

e Care Service Groups set up on your chosen CSG.

5

The updated service user list will be displayed.
